GDP = gross domestic product; OECD = Organisation for Economic Co-operation and Development.

[a] Population density represents the percentage of the population living in a density of >1,000 people/km2.

[b] GDP per capita is in current US dollars and is scaled by 1,000.

[c] Urban residence represents the percentage of the population living in urban areas.

[d] The age dependency ratio represents the proportion of dependents aged under 15 years or over 64 years per 100 working-age individuals.

[e] Male education is expressed as years per capita and is age-standardised.

[f] Temperature is the mean population-weighted annual temperature in degrees Celsius.

[g] Rainfall is the mean population-weighted annual rainfall in millimetres per year, scaled by 1,000.

[h] Earthquake and drought are binary variables representing their absence or presence.

[i] All armed conflict variables were lagged by 1 year.

Summary statistics are based on country-year observations from 2000 to 2017; countries may contribute multiple observations across years.
